MISSING PAGE

ORIGINAL DOCUMENT MISSING PAGE(S):

Extract from Shrushchev Letter of June 2, 1958 Se Types Of Goods Lesired by Ellis from U.L.

"In the opinion of the Soviet Jovernment, cooperation between our countries in the field of the production of synthetic materials and finished articles thereof could be developed along the following lines:

Furthers by the Soviet Union of incustrial equipment in the United States, including complete equipment for plants and factories;

Conclusion of agreements with first for obtaining licenses in individual cases, for inviting American specialists to work to lowist, enterprises as consultants on the production of certain synthetic materials, and for acquainting lovist specialists with the production of these materials and finished articles thereof. The Soviet Endon, for its part, is prepared to make it possible for american specialists to learn about the achievements of the Walk in this field;

Erganizations of meetings of American and Soviet scientists and specialists for discussing problems of production of synthetic materials, organization of exhibits of samples of materials, products made from them, etc.;

Mutual participation of Soviet scientists in the work of scientific research institutions of the U.A. and of American scientists in the work of scientific research institutions of the U.S., both with a view to exchanging experience and also to developing jointly new types of synthetic materials and technological processes.

At the same time the Soviet Union could propose a broad program for placing orders in the USA also for other types of equipment for the production of consumer goods, and for housing and public construction. Orders could be placed for refrigeration equipment; installations for air conditioning; equipment for the cellulate, paper, and moon-processing industries, the textile, leather-footmear, and food industries; television equipment; equipment for the manufacture of packing materials; packing, packaging, and automatic vending machines; pumps and compressors; machinery for the mining industry, for the manufacture of building materials and the machanization of construction; hoisting, transporting, and other equipment.

In addition to this, big orders could be placed for a number of industrial materials and finished products, including orders for equipment for rolling ferrous metals, pipes for city gas lines, various commical products, medical equipment, medicines, and certain consumer coods."

```
acetylene from natural gas (50,000 tons)
polyetnylene and polypropylene (25/30 thousand tens, 5/10 thousand tens)
phthalic anhydride (15,000 tons)
acrolonitrile (two plants -- each 2,900 tons)
meleic anhydride (6,000 tens)
ethylene recovery plant, sulfur extraction (of 70 tons per annum)
foss polyurethane (3000 tons)
caprolactem from amiline (10,000 tons)
melamine (10,000 tons)
di-isocyanate (5.0:0 tons)
moltopren, soft and hard rubber foam (1,000 tons)
polyacrylanitrile (2,700 tons)
bexame thylenediamine from butadiene (5-10,000 tons)
polyviry1 pyrolidone (180 tens)
titanium dioxide from tetrachloride (20,000 tens)
 titanium dioxide rutile (especity not stated)
viscose cord fiber (about 50 tons a day)
 polyacrylylmitrile staple fiber (15 tons a day)
high disperse filler "airocyle" (5,000 tens)
 nylon fiber (5,100 tone)
 cellophane lacquered film (3,400 tons)
viscose staple fiber (70 tons a day)
 terilene fiber (L tens a day)
 acetic anhydrides (2,00 tons)
Divingle (50,000-70,000 tone)
 cellulose for high strength cord (100,000 tons)
 caustic soda (100,000 - 120,000 tons)

ITEMS UNDER UNITATERAL U.S. DENIAL POLICY TO THE SOVIET BLCC

The attached list represents those items which are currently under a U.S. export denial policy to the Soviet bloc. The following explanation of the coding employed may assist in understanding the presentation:

- 1. The appearance of the number 4 as the fourth digit in the item number signifies that all or part of the item is under International Secondary List control; the termination of the item number with the letter U signifies that U.S. control is deemed to be effective; where no terminal U appears, a denial policy exists even though it is deemed not to be effective; all of these items are on SECL (Department of Commerce Security Export Control List).
- 2. The appearance of a number 5 as the fourth digit in the item number signifies that the item is not under any international list control but is under U.S. unilateral denial policy toward the Soviet bloc. The appearance or non-appearance of a terminal U has the same significance as in 1. above. All of these items are on SECL.
- 3. The appearance of a number 6 as the fourth digit in the item number signifies that the item is not an official part of the SECL but is under a denial policy toward the Soviet bloc in most instances because of its clear military importance even though the impact on the bloc is not deemed to be effective.
- 4. Under Criteria the letters A, B and C refer to the three basic criteria for strategic rating.
- 5. Under Criteria the numbers refer to action guides. The relevant guides are identified below:
 - A. Items on the International Secondary Control List which meet strategic criterion A, B or C and which can be effectively controlled by the U.S. shall be placed on SECL; shall be placed on the Positive List to prevent illegal shipments to the Sino-Soviet bloc and/or to assure the effectiveness of U.S. unilateral control; and shall be limited to cr placed under a presumption of denial to the Soviet bloc as necessary to achieve a worthwhile adverse effect on Soviet bloc war potential. 1/(Old IMA Criterion 2(a)).

- 4. Items (other than those multilaterally agreed for embargo or those covered by 2. above) which meet strategic criterion A or B and which can be effectively controlled by the U.S. shall be placed on SECL; shall be placed on the Positive List to prevent illegal shipments to the Soviet bloc and/or to assure the effectiveness of U.S. unilateral control; and shall be placed under a presumption of denial to the Soviet bloc. 1/ (Old IMA Criteria B and 5).
- Lists which meet strategic criterion A or B, and are judged to be of clear military importance, but which cannot be effectively controlled by the U.S., shall not be placed on SECL (except for International Secondary Control List items which shall be listed on SECL); shall not be placed on the Positive List; but shall be placed on the Polish Exceptions List to General License GRO, and shall be under a presumption of denial to the Soviet Bloc. (Old IMA Criteria A! and 4!).
- 6. Items (other than those multilaterally agreed for embargo or those covered by 2. above) which meet strategic criterion C and which can be effectively controlled by the U.S. shall be placed on SECL; shall be placed on the Positive List or on the Polish GRO exceptions list, whichever is appropriate, to prevent illegal shipments to the Soviet bloc and/or to assure the effectiveness of U.S. unilateral control; and shall be denied or limited to the Soviet bloc, as necessary, to achieve a worthwhile adverse effect on Soviet bloc war potential. 1/ (Old IMA Criteria 2' and 6).
- 7. Other items for which it is judged that limitation on exports would serve U.S. foreign policy or other U.S. policy objectives shall not be placed on SECL but may be placed on the Positive List or on the Polish GRO exceptions list, as necessary, and shall be limited or denied as appropriate to accomplish the desired policy objective. (Old IMA Criteria 7 and 8).
- As used in these guides the terms "effectively controlled by the U.S." and "effectiveness of U.S. unilateral control" means that such control of the item so identified would limit the war potential of the Sino Soviet bloc through the ability of the U.S. to significantly deprive (quantitatively or qualitatively) the bloc of materials, equipment, services or technology, either directly or indirectly through friendly Free World countries, because of the U.S. potential control position re their net Free World export availabilities to the Bloc.

ITEMS UNDER UNILATERAL U. S. DENIAL POLICY TO THE SOVIET BLOC

Item No.	Item Description	Crite	ria
METALWORK	ING MACHINERY		
001*700	Vertical boring and turning mills, automatic cycle types.	A,B,C	, 2
002,60	Jig boring machines, n.e.s.	A,B,C	5
021,60	Jig grinders, n.e.s.	A,B,C	5
022 _* 50U	Contour band sawing and band filing machines: (a) capable of using blades less than 5/16" wide; (b) designed to permit operator to select rate of cutting speed, and to vary such speed while in operation, and to maintain at all times the desired rate of speed with a variation of less than 2%.	A	4
027 . 400	Grinding machines for broaching tools, auto cycle, auto sizing.	A	2
052.40	Planer milling machines, and combination planer and planer milling machines with capacity for work pieces 72 inches (1,80m) wide and over, or 20 feet (6.0m) long and over.	В	3,5
070 *500	Horizontal impact hammers, n.e.s.	В	4
072,410	Presses, mechanical or hydraulic, with rated pressures of 2000 tons to 5000 tons inclusive.	В,С	2
075 . 500	Spinning lathes with a spindle drive motor of 15 up to and including 25 hp.	A,B,C	4,6
090.41	Die-sinking machines	A,B,C	3 , 5

ELECTRICAL	AND POWER GENERATING EQUIPMENT		
260°200	Electric generators, turbo generators and turbines designed for turbo-generators, 200,000 KW and over, and specially designed parts.	A,B,C	4
260.61	Electric generators, turbo generators, turbines designed for turbo-generators and synchronous condensers of 60,000 KW up to, but not including, 200,000 KW, and specially designed parts.	В,С	5
260.62	Electric motors of 12,500 hp and over; and automatic and semi-automatic equipment for starting, stopping, reversing and speed control of these motors.	A	5
265.40	Electric power generating units of $\frac{1}{2}KW$ or over, up to and including 5000 KW.	A	3,5

7	Item No.	Item Description	Criter	ia
	GENERAL I	NDUSTRIAL EQUIPMENT		
	305.41U 305.42U	Metal rolling mills, as follows: (a) continuous 4 high hot strip and sheet mills (b) plate rolling mills	B,C B,C	2
	323 . 500	Power cranes and/or shovels, full-revolving: (a) crawler or walker-mounted, over 6 cu yds bucket capacity; (b) wagon or truck-mounted, over 6 cu yds bucket capacity or over 20 tons crane lifting capacity.	B,C	4,6
	350.410	Carbon black furnaces, combustion type only	В	2
	355,60	Radio valve making machinery, except: (a) machinery, equipment and test gear specially designed for the manufacture of various types of embargoed electronic valves, transistors and crystal diodes (including sub-assemblies therefor); (b) machinery, equipment and test gear specially designed for automatic or semi-automatic assembly of electronic valves, transistors and crystal diodes (including components or sub-assemblies therefor).		7
	380 . hz	Compressors and blowers, n.e.s., as follows: (a) compressors and blowers, n.e.s., capable of delivering air, gases, or vapors at pressures of 700 psi or over and requiring a drive rated 2000 hp or over.	B,C	3,5
	385.40	Diamonds suitable for industrial use, including splints and borts.	С	3,5
	385 . 500	Synthetic industrial diamonds.	A • C	2
	386,40	Diamond wire drawing dies.	A,C	3 , 5
•	386,60	Diamond dressers; diamond boring and turning tools; diamond core drill bits.	A,C	5
•	387 . 410	Diamond grinding wheels.	A,C	2.5

į	TRANSPORTA	TION EQUIPMENT		
	401.60	Floating docks.	A	5,7
	402,61	Dredges incorporating dredging machines, as follows: (a) hydraulic type with a pump discharge diameter in excess of 30 inches; (b) ladder-bucket type with each bucket having a capacity of 9 cu ft or more.	В,С	7
	402.62	Dredges other than those incorporating dredging machines.		7
	402.63	Specialized dredge equipment and components, such as dredging machines, grabs, buckets, cutters, ladders, centrifugal pumps, and floating and shore pipelines, n.e.	: S•	7
•	405.61	Icebreakers of 2000 shaft hp up to 10,000 shaft hp and similar vessels 2000 shaft hp and over, principally designed for breaking ice having any of the following: (a) bow propeller; (b) special hull shape; (c) propulsion plant permitting quick reversing and development of maximum power at all speeds; (d) stern saddle arrangements for towing operation; (e) excessive electrical supplies and pumping facilities.	A S	5,7
	405.62	Icebreakers of under 2000 shaft hp and similar vessels designed for breaking ice having any of the following: (a) bow propeller; (b) special hull shape; (c) propulsion plant permitting quick reversing and development of maximum power at all speeds; (d) stern saddle arrangements for towing operations; (e) excessive electrical supplies and pumping facilities.		7
	410.40	Tankers designed for speeds of 18 knots or less when in full load (design) condition.	C 3	3,7
	410.60	Tank barges.		3,7
	411.40	Whaling factories.	C /	7

Item No. Item Description Criteria TRANSPORTATION EQUIPMENT (continued) 416.61 Fishing vessels and hulls therefor, n.e.s., designed 5,7 for speeds of less than 17 knots when in full load (design) condition, incorporating any of the following special features: (a) deck or hull strengthening for weapons or special construction to accommodate or carry military equipment; (b) hull design suitable for direct beachings; (c) bow or stern doors; (d) any arrangements for demagnetizing or the provision of non-magnetic characteristics; (e) electrical generating capacity in abnormal excess of the needs for the vessel as a fishing vessel; (f) incorporating any Munitions List items 1/ and any of the following embargoed items: 485.10 (except the types specified in Interpretative Note No. 5), 501.10, 502.10, 510.10, and certain types of buoyant cable 2/. 416.62 Fishing vessels and hulls therefor, n.e.s., designed for 7 speeds of less than 17 knots when in full load (design) condition, as follows: (a) wood or other non-magnetic hull of 60 feet (18 m) or more in length between perpendiculars, unless built before 1939, in which case 100 feet (30 m) or more in length, except the following vessels when their speed is not more than 10 knots and their electric generating capacity is under 35 KW: (1) Bonito and tuna vessels under 130 feet (40 m) in length between perpendiculars, either fitted with sponson platforms for line fishing or of the long line type; (2) seal fishing vessels under 130 feet (40 m) in length; (3) fishing cutters (Scandinavian type) under 100 feet (30 m) in length; (b) 200 feet (60 m) or more in length between perpendiculars; (c) maximum speed in deep load condition of 12 knots or more; (d) total round trip range at design speed above 7000 miles. in fishing condition; (e) strengthening against ice beyond the requirements of

Fishing vessels and hulls therefor, with length between perpendiculars cover 50 feet (15 m) except those covered by items 416.10 and 416.64.

Should Coverage of Treasury's Transaction Controls be Expanded?

13

One anti-frustration technique available to buttress 0. 5. unilateral controls toward Soviet bloc is Treasury's Transaction Controls which have always been limited in application to items under multilateral embargo or items on the ACC or Munitions Control Board List. This control can to a limited extent extend 0. 5. denial policies extra-territorially to activities of 0. 5. firms and individuals abroad and activities of foreign firms subject to this control.

question: Should transaction controls be extended to cover items now subject to unilateral U. S. export controls? If so, over what coverage in terms of item listings and transaction participants?

Converse and Defense favor extending transaction controls to cover all 8.5. unilateral denial areas of materials, equipment, technical data and technical services which will effectively assure comparable treatment of 6.5. firms' or individuals' export activity within the 8.5. and abroad. Recognizing the difficulties which full implementation may bring to foreign policy considerations, Commerce and Defense would be willing to accept expansion of transaction controls to cover the following:

- Technical data and services relating to items for which smltllateral embargo has been agreed; (involves coverage of U.S. firms, their foreign subsidiaries and foreign firms subject to their control);
- 2. Exports from foreign sources by firms domiciled in the C.S. of materials, equipment, technology and services over which E.S. unilateral export controls have been determined to be effective; (Excludes coverage of firms, foreign subsidiaries and foreign firms subject to their control; thus minimizes impact foreign policy concern); and
- 3. Over such other exports as may be determined on a case-bycase basis to be both feasible or appropriate which will
 achieve through unilateral . S. action an effective impact
 on the Soviet bloc in terms of 3.5. policy objectives.

Commerce and Defense believe that these proposals would provide adequate exportanity for reflecting foreign policy concern. They also believe such action would materially assist achieving most effective impact of unilateral 1. 2. controls and would not produce serious friction with other friendly governments.

Treasury views its function in applying transaction controls as supplementing the enforcement of the Government's expert control program. It is willing to apply its controls to such areas as the interested agencies may exree are necessary. Treasury's principal desires are to be sure its controls make an effective contribution and that they involve a minimum of discripication of a type which might undermine the administration of its controls. It would prefer that any further transaction controls

GONETTON HITTAL

suggested be limited to selected areas in which the control will clearly increase the effective impact on the Soviet bloc and that it apply to all F. F. or W. S. controlled participants as at present. It would oppose any extension of these controls if such extension were to weaken its ability to apply its controls as they presently exist and it is a grave concern that this might be an effect of an extension.

Treasury also believes that the extension of Fransaction Controls over tecomical data is unnecessary. It knows of no reidence that Aparicancontrolled firms a road produce important technical data in significant quantities. The only cases of which it is aware involving the handling of technical data by American firms aproad are those in which the technical cata involved originated in the United States and thus was more properly subject to Export Control Regulations. It should be noted especially, however, that the application of Transaction Control Regulatic s to technical data (and to a certain extent these Regulations have been so applied on an interim basis while Commerce considers the matter) only joes to a minor part of the problem. It seems to freasury that the centrals over technical data, to the extent that they are needed, are required across the board-- and this over-all mandatory control can only be accomplished under the Export Control Regulations. In other words, the major aspect of the problem is where a foreign, non-American controlled, company obtains technical data from a firm in the United States and sends it, or its fruits, to the Soviet bloc -- and this type of conduct cannot well be reached under the Transaction Control Regulations.

An effective Commerce mandatory export control program over all technical data adaptments of a strategic nature could not only prevent the commard transmission of technical data to the soviet bloc but also could ensure that products manufactured abroad on the basis of technical data exported from the United States are precluded by provisions in licensing agreements, or otherwise, from poing to Soviet bloc destinations. This is a type of control which Commerce previously enforced but has abandoned.

State opposes any expansion of transaction controls beyond the area of applicability agreed internationally - COOM embargood items. Etate believes that any expansion would be detrimental to 0.0. foreign relations, would increase adverse reaction by foreign governments such as recent reaction by anada, would be viewed by COOM member governments as act of bad faith with regard to recent 0.0. Agreements at the Consultative Group meeting in sidely58 and would not be effective in preventing the Soviet blue from securing identical meterials from non-0.0. controlled foreign firms.
